Model VS-320
Silent Pneumatic
Turbine Vibrator**

VIBCO'S SOLUTION

Two VIBCO Model VS-320 Silent Pneumatic Turbine Vibrators were installed on the bins to replace the inefficient ball vibrator. As soon as the cross over was complete, sand flowed on demand and the production rate increased significantly. Additionally, there are no more man hours lost to bin banging and the noise level has dropped dramatically.

VIBCO'S BENEFITS

After installing the two VIBCO VS-320 Silent Pneumatic Turbine Vibrators the customer received the following benefits:

- Easy cross over with VIBCO's direct bolt replacement and FREE adapter plates
- Longer vibrator life with 45% less air consumption than ball vibrators and no lubrication required
- Noise level was reduced to well below OSHA standards

VS-320

BINS

"It can be tough to keep sand moving...

It's particularly bad when it gets a little damp - the sand just packs right up. We were having trouble moving it from the upper to the lower bin. We did have one of those noisy ball vibrators mounted, but it wasn't doing a good job. We ended up having to bang on the bin anyway, which only added to the noise and cost us time. I talked to our equipment dealer and he recommended that we cross over to two VIBCO VS-320 Silent Turbine Vibrators. We haven't had a problem with our sand flow since!"
